1.2 SUMMARY
A. This section includes aluminum plate column covers that are used as the exterior and interior cladding

1.3 PERFORMANCE REQUIREMENTS
A. Structural Performance: provide column cover assemblies capable of withstanding the effects of normal stress from thermal movements and load affects from: wind loads, dead loads, and snow loads; without evidence of permanent defects of the assembly.
B. System design for a mechanically fastened assembly to substructure
   1. Dead Load as required by applicable building code
   2. Live Load as required by applicable building code
   3. Wind Load: uniform pressure (define velocity pressure) of (insert design criteria) pound/square foot, acting inward and outward.
   4. Thermal Movements: provide column assemblies that allow for thermal movements to prevent buckling, opening of joints and other thermal effects
C. Design the column for a mechanically fastened assembly to substructure
D. Design column tolerances to manufacturer’s standard tolerances
E. Metal columns to have a maximum allowable deflection of L/180
F. Column joints will be sealed appropriately using backer rod and approved caulk
